INDEX.

Adie, Richard, on the connection between the colour of substances and their magnetic properties, 209.

Ærolites, shower of, 181.

Agassiz, Professor, on the natural history of the naked-eyed medusæ or jelly fishes, 85—his American Zoological Journal announced, 184—on classifications in zoology, 227.

Address delivered at the Anniversary Meeting of the Geological Society of London, on the 15th February 1850, by the President, Sir Charles Lyell, F.R.S., &c., &c., 1.

America, its first discovery—observations on, 90.

Analogy between the mode of reproduction in plants, and the "Alternation of Generations" observed in some radiata, 266.

Anderson, Thomas, M.D., on a remarkable compound of iodine and codeine, 103—On a new mineral named Gurolite, 367.

Arsenious acid, on interesting changes of its internal structure when in a solid state, 346.

Auriferous districts of Wicklow, account of, by William Mallet, Esq., 82.

Barrande, Joachim, on the Silurian system of Bohemia, by Professor Nicol, 107.

Blind fish of the Mammoth cave of Missouri, account of, by Professor Agassiz, 254.

Buist, Dr, of Bombay, his account of floods in India, 52—on the general vibration or descent and upheaval of the land over the northern hemisphere, 322.

Carbon, its tetramorphism considered, by Henry Clifton Sorby, Esq., F.G.S., &c., 149.

Carbonic acid exhalations, researches on, by Professor Bischoff, 182.

Central heat of the earth, observations on, by Stevenson Macadam, Esq., 127—on the cause of the phenomena exhibited by the Geysers of Iceland, 222.

Climate of New Zealand, alleged change of, 182.

Cull, Richard, M.D., his remarks on three Naloo negro skulls, 40.

Delesse, Professor, on the rose-coloured syenite of Egypt, 260.

Dynamic equivalent of current electricity, and on a fixed scale for electromotive force in galvanometry, by William Petrie, Esq., 64.

INDEX.

Adie, Richard, on the connection between the colour of substances and their magnetic properties, 209.

Ærolites, shower of, 181.

Agassiz, Professor, on the natural history of the naked-eyed medusæ or jelly fishes, 85—his American Zoological Journal announced, 184—on classifications in zoology, 227.

Address delivered at the Anniversary Meeting of the Geological Society of London, on the 15th February 1850, by the President, Sir Charles Lyell, F.R.S., &c., &c., 1.

America, its first discovery—observations on, 90.

Analogy between the mode of reproduction in plants, and the "Alternation of Generations" observed in some radiata, 266.

Anderson, Thomas, M.D., on a remarkable compound of iodine and codeine, 103—On a new mineral named Gurolite, 367.

Arsenious acid, on interesting changes of its internal structure when in a solid state, 346.

Auriferous districts of Wicklow, account of, by William Mallet, Esq., 82.

Barrande, Joachim, on the Silurian system of Bohemia, by Professor Nicol, 107.

Blind fish of the Mammoth cave of Missouri, account of, by Professor Agassiz, 254.

Buist, Dr, of Bombay, his account of floods in India, 52—on the general vibration or descent and upheaval of the land over the northern hemisphere, 322.

Carbon, its tetramorphism considered, by Henry Clifton Sorby, Esq., F.G.S., &c., 149.

Carbonic acid exhalations, researches on, by Professor Bischoff, 182.

Central heat of the earth, observations on, by Stevenson Macadam, Esq., 127—on the cause of the phenomena exhibited by the Geysers of Iceland, 222.

Climate of New Zealand, alleged change of, 182.

Cull, Richard, M.D., his remarks on three Naloo negro skulls, 40.

Delesse, Professor, on the rose-coloured syenite of Egypt, 260.

Dynamic equivalent of current electricity, and on a fixed scale for electromotive force in galvanometry, by William Petrie, Esq., 64.

Edmonds, Richard, jun., on a bronze furnace, supposed to be Phœnician, found in Cornwall, 58.
Electrical houses in New York, account of, by Professor Loomis, 225.
Emery of Commerce, account of, 318.
Forbes, Professor J. D., his sixteenth letter on glaciers, 167—On the alleged evidence for physical connection between stars forming binary or multiple groups, deduced from the doctrine of chances, 159.
Forbes, David, Esq., his chemical examination of purple copper ore and copper pyrites, with remarks on their constitution, 278.
Forbes, Professor Edward, his account of recent researches into the natural history of the British seas, 335.
Forests of Madeira, destruction of, 181.
Fossil eggs of snakes, in fresh-water limestone, 165.
Geysers of Iceland, observations on, by S. Macadam, 222.
Guiana Forests, their miseries and delights, 368.
Haidinger, Professor, on the optical properties of a compound of iodine and codeine, 122.
Henwood, J. W., F.R.S., on the gold deposits of Brazil, 61.
Iceland, map of, by the Danish government, account of, 366.
Johnston, A. Keith, F.R.S.E., &c., his remarks on the scale adopted for the Ordnance map of Scotland, 349.
Indian floods, account of, 52—islands in the Pacific Ocean, their physiognomy, by Dana, 217.
Light, its velocity considered, by Humboldt, 256.
London, statistics of, 378.
Lyell, Sir Charles, his anniversary address to the Geological Society of London, 1.
Macadam, Stevenson, on central heat of the earth, 127—and on the Geysers of Iceland, 222.
Magnetic needle, its diurnal movements, by Dr Faraday, 180.
Magnetic diurnal variation, probable cause of, by J. A. Broun, Esq., 180.
Mallet, Wm., Esq., on the minerals of the auriferous districts of Wicklow, 82.
Mantell, Gideon Algernon, on remains of man and works of art imbedded in rocks and strata, 235.
Martins, Ch., on the intensity of sound in the rarified air over high mountains, 70—On the striated rocks around Edinburgh, 301.
Medusæ or jelly fishes, observations on, 85.
Meteorology of the Alps, 296.
Micas, American, their optical characters, by Dr B. Silliman, 339.
Nails and hair of man, observations on their increase, 183.
Owen, Professor, Syllabus of Lectures on Comparative Osteology, 329—On metamorphosis and metagenesis, 268.

XUM

Physiognomy of the islands in the Pacific, by James D. Dana, 217.
Polar lights, new theory of, by J. A. Broun, 179.
Petrie, W., Esq., on the application of electricity and heat as moving powers, 66.
Scoresby, William, D.D, on prismatic colours in dew-drops, 48.
Schlagintweit, Hermann and Adolph, on the physical geography of the Alps, 287.
Smyth, C. P., Professor, his astronomical and meteorological notices, 353.
Silurian System of Bohemia, by M. Barrande, 107.
Silliman, Dr B., on the optical characters of American micas, 339.
Sugar, detonating, account of, 185.
Surgical operations without pain, 375.
Stevenson, Robert, F.R.S.E., C.E., &c., biographical sketch of, by Alan Stevenson, C.E., 103.
Snow line of the Himalayas, investigated by Captain Hutton, 93.
Starvation, external symptoms of, as exhibited in famine districts in Ireland, 184.
Sorby, Henry Clifton, on the tetramorphism of carbon, 149.
Syenite of Egypt, described by Professor Delesse, 260.
Taylor, Hugh, Esq., on the chemical constitution of the rocks of the coal formation, 146.
Thunder of waterfalls explained, 370.
Traces of an ethnic connection between the basin of the Ganges and the Indian Archipelago before the advance of the Hindus into India, 371.
Uziglio, M., his analysis of the waters of the Mediterranean, 79.
Valleys, origin of, 288.
Voyage from Leith to Grenada, by P. Gillespie, 130.
Vegetation, its probable effects on climate, 161.
Zoological classification, observations on, by Professor Agassiz, 227.
